

Factory Evaluation Introduction:

Before placing an order, Customer may request that we perform an Initial Factory Evaluation. we examines the vendor's production capability, machinery, management and quality control procedures, operations and processes. we will also brief the vendor regarding the customer's quality requirements. The Factory Evaluation ensures that an appropriate factory is used and that the customer's quality specifications are fully understood.

Before placing an order with a new manufacturer it is important to ensure that your quality specifications are fully understood, and that the supplier has adequate production capability, working conditions, management and quality control processes. Hence, many buyers request that we perform Factory Evaluation. Zooqc examines the vendor's production capability, machinery, management and quality procedures, operations and processes. We will also brief the vendor regarding the quality requirements of your company. Factory Evaluation ensures that an appropriate factory is used and the quality specification of your company is thoroughly understood. We would seek buyer's demand and focus to design the program. Basically, the areas covered in Factory Evaluation include:

- vendor identification
- product range
- major market & major clients
- manpower
- production capability
- machinery and equipment
- management and quality procedures
- manufacturing process
- in-house quality control such as testing and inspection
- raw material management
- semi-finished and finished product management
- other issues customer concerned
